SUMMARY

Software Engineering graduate from The Superior University with 2+ years of hands-on full-stack development, including university projects. I build web applications with Laravel, React and Vue.js, and practical AI agent workflows with RAG and LangGraph. Proven record of designing enterprise ERP and POS systems, real-time inventory sync modules and accurate document intelligence pipelines.

SKILLS

Languages	PHP, Python, JavaScript, TypeScript, HTML, CSS
Frameworks	Laravel, FastAPI, React.js, Vue.js, Inertia.js, Tailwind CSS, Vite
AI and automation	RAG, Generative AI, AI Agents, LangChain, LangGraph (stateful RAG), PyTorch, Keras, Chroma DB, Embeddings, Tokenization, faster-whisper, edge-tts, WhatsApp Automation (Green API)
Backend and architecture	RESTful APIs, Eloquent ORM, MySQL, ERP/POS and Inventory Modules, Role-Based Access Control (RBAC)
3D web and tools	Three.js, TresJS, Anime.js, GSAP, GitHub
Soft skills	Team Communication, Problem Solving, Autonomous Workflow Design
Languages spoken	English (Fluent), Urdu (Native)

EXPERIENCE

Freelance Full-Stack Developer | Remote — Mar 2026 – Present

- Build ERP, POS, booking and e-commerce systems for clients with Laravel, React and TypeScript, including A.R. Interiors ERP/POS and Black Ride Limo (blackridelimos.com).
- Integrate Stripe and Safepay payments and real-time updates with Laravel Reverb.
- Build AI services with FastAPI and LangGraph, including WhatsApp and voice assistants.

Laravel and React Trainee | CodeBrisk, Sargodha — Nov 2025 – Mar 2026

- Trained in full-stack development with Laravel and React, including state management and API integrations.
- Developed reusable components for complex web applications.

Software Developer Intern | Shalimar Group of Companies, Sargodha — Mar 2025 – Nov 2025

- Built and improved backend parts of internal business applications with Laravel (PHP), MySQL and RESTful APIs, which made data responses faster.
- Made responsive front-end parts and data tables with Vue.js and JavaScript, and fixed UI and UX issues with senior developers.
- Improved database queries and fixed errors to keep enterprise systems running reliably every day.

PROJECTS

A.R. Interiors ERP/POS: Full-stack system built with Laravel and React that manages inventory and point-of-sale operations. It solves stock mismatches between warehouse and counter by syncing data in real time, and uses role-based access control for user-specific permissions.

Enterprise Knowledge Hub: Document chat engine built with Python and Chroma DB that uses RAG to help users quickly find information in corporate documents, without searching complex files by hand.

Zero-Hallucination Doc Q&A: PDF assistant that answers without making things up. It enforces citations so every answer comes from a source, which is critical for regulatory searches.

Stateful Multi-Agent Blueprint: LangGraph workflow that runs agents in a structured pipeline. It handles reports with mixed formats, avoids repeated steps and early failures, and tracks progress to reduce failure loops in long processes.

EDUCATION

BS in Software Engineering | The Superior University, Sargodha, Pakistan — Nov 2022 – Jul 2026
